SAP Best Practices for SAP S/4HANA Cloud Private Edition: Software and Delivery Requirements

THE BEST RUN SAP

Content

1   Purpose of the Document

This document contains all information to:

- Validate that key prerequisites such as software products and versions match the customer situation
- Check that all prerequisites for a customer implementation are in place
- Check that correct content, tools and skills are in place before the project starts.

The document will list different kinds of requirements on solution scenario level if they are valid for all assigned scope items. For requirements valid for certain scope items only, these scope items are mentioned.

The document contains prerequisites only, not the procedures to meet them. For how-to information, please refer to the (Administration Guide for the Implementation of SAP S/4HANA Cloud Private Edition 2023).

General Project Prerequisites

The following prerequisites need to be in place before an implementation project can start.

Prerequisite	Responsibility
Kick off and workshop dates, location and attendees agreed	Customer
Customer team allocated with correct skills and training in place	Customer
Project sponsors and stakeholder identified	Customer
Hardware fully commissioned	Customer
Software licenses in place	Customer
Infrastructure team can respond to requests quickly enough, for example, CSS notes, BW content, patches, user requests, authorization changes and transports	Customer
User interfaces agreed, for example, SAPGUI, SAP Fiori	Customer
Remote access is in place for SAP consultants and SAP Active Global Support	Customer
Decision made whether SAP Best Practices Solution Builder will be used to activate content (recommended).	Customer
Tool for project repository and collaboration agreed	Customer
Test management tool agreed	Customer

2.3 Active Business Functions Required

Functionality in this solution package requires certain business functions to be active in the SAP landscape. If you decide to select the mentioned scope items to be included in your solution, you need to activate these business functions. Otherwise, you have to deselect the scope items when you define the solution scope.

After installing the software for the private edition of SAP S/4HANA Cloud, **but before activating** the SAP Best Practices content, activate the following SAP Business Functions depending on your scoping decision.

> **⚠ Caution**
>
> - The activation of Enterprise Extensions, Business Functions, and Business Function Sets changes your system and cannot be rolled back. For more information about the impact, check the documentation of the related extension or business function.
> - Activate all Business Functions as outlined in the table below **before you create the client** in which you want to activate the solutions that contain the SAP Best Practices content for the private edition of SAP S/4HANA Cloud.
> - **Do not activate** additional Enterprise Extensions or Business Functions (in addition to the required business functions mentioned for SAP Best Practices deployment) before content activation. This can result in errors during activation of SAP Best Practices content. Additional Business Functions can be activated anytime after content activation, but this requires regression testing of the business processes, which is standard practice for any major software changes made in the system.

2.4   System Landscape

The Front-End Server (SAP Gateway) connects to the ABAP Back-End Server (i.e. SAP S/4HANA) and other SAP Business Suite Server. The requests of the clients are routed via the SAP Web Dispatcher. Find more details on the architecture of SAP Fiori configuration in the product assistance for SAP S/4HANA Cloud Private Edition on the SAP Help Portal under ▐▶ *Discover* ❭ *Product Assistance* ❭ *Enterprise Technology* ❭ *SAP Fiori* ❭ *SAP Fiori Overview* ❭

When creating Adobe Forms (e.g. PDF Documents) out of an SAP system, the rendering is done by Adobe Document Services. The system landscape diagram shows the relevant component.

2.5   Connectivity

This section gives an overview of the required RFC destinations that are required for this solution.

RFC Destination	Description	Connection Type	More Information
<system id >CLNT**<Client>**	RFC Destination to SAP S/4HANA Server	3	Manage RFC Destinations from ABAP Front-End Server to ABAP Back-End Systems
<system id >CLNT**<Client>**	RFC Destination to SAP Gateway Server	3	Connect Gateway to Back-End System (Trusted RFC)
<system id >CLNT **<Client>**	RFC Destination to SAP S/4HANA Server	H	Creating an HTTP RFC Destination to Back-End Server

> ⓘ Note

You can check the RFC destinations using transaction `SM59`.

2.6 Authorizations

For **required authorizations**, please check the respective sections in the Administration Guide for the Implementation of SAP S/4HANA Cloud Private Edition 2023.
